

Povidone Iodine Swabsticks

Dukal's Povidone Iodine Swabsticks are sterile skin antiseptics designed to disinfect the skin before certain procedures, such as surgery or injection. They consist of a Povidone iodine 10% solution which is widely used for patient preoperative skin preparation in healthcare facilities to reduce bacteria that potentially can cause skin infection. This solution also provides healing properties when applied to wounds or burns and helps protect the growth of healthy tissue.

FEATURES/BENEFITS:

- Intended for patient preoperative skin preparation
- Also used for disinfection of wounds or burns
- Helps to reduce bacteria that potentially can cause skin infection.
- Povidone-Iodine USP 10% solution
- Sterile, single-use, easy to use foil pouch that prevents cross contamination
- Available in Swabsticks (1s) and (3s)
